

Assignment 3: AI Product Card Generator

Objective

Create a simple web page that generates a product card using Gemini AI.

The user will enter a product idea, and Gemini will generate marketing content that will be displayed in a visually appealing card.

Problem Statement

You are building a mini AI tool for startup founders.

The user enters a product idea, such as:

- Smart Water Bottle
- AI Study Assistant
- Pet Health Tracker

When the user clicks the **Generate Product Card** button, Gemini should generate:

- Product Name
- Tagline
- Short Description

The generated content should be displayed in a product card.

Example

User Input

AI Study Assistant

AI Output

Product Name: StudyBuddy AI

Tagline: Learn Smarter, Not Harder

Description: An AI-powered study companion that helps students summarize notes, create quizzes, and stay organized.

Requirements

Input Section

- Text box for product idea
- Generate button

AI Integration

Use Gemini API to generate:

- Product Name
- Tagline
- Short Description

Product Card

Display:

- Product Name
- Tagline
- Description

Use simple CSS to make the card attractive.

Bonus (Optional)

Add:

- A random emoji based on the product
- Background color change
- Copy-to-clipboard button

Submission Guidelines

You may submit your work using either of the following methods:

Option 1: Paste Directly

Paste the following into the answer box:

- Gemini Prompt Used
- HTML Code
- CSS Code
- JavaScript Code

Option 2: Google Drive

Upload your files to Google Drive and share the folder link in the answer box.

Recommended files:

- index.html
- style.css
- script.js
- Screenshot of output

Deliverables

1. Source Code
2. Gemini Prompt Used
3. Screenshot of Output

Good luck and have fun building your first AI-powered application!
